**IMPORTANT SAFETY INSTRUCTIONS**

**SAVE THESE INSTRUCTIONS**

This manual contains important safety instructions. Read all safety and operating instructions before operating the uninterruptible power system (UPS). Adhere to all warnings on the unit and in this manual. Follow all operating and user instructions. This equipment can be operated by individuals without previous training.

This product is designed for commercial/industrial use only. It is not intended for use with life support and other designated “critical” devices. Maximum load must not exceed that shown on the UPS rating label. The UPS is designed for data processing equipment. If uncertain, consult your dealer or local Emerson Network Power representative.

This UPS is designed for use on a properly grounded (earthed), 100/200, 110/220, 115/230, 120/208, 120/240 or 127/220VAC, 50 or 60Hz supply. The factory default setting is 120/208VAC, 60Hz. Installation instructions and warning notices are in this manual.

The GXT3 208VAC 5000 - 10000 is designed for use with a four-wire input (L1, L2, N, G).

The GXT3-6000RTL630 is designed be used with a three-wire, two-phase utility source (L1, L2, G).

**WARNING**

The battery can present a risk of electrical shock and high short circuit current. The following precautions should be observed when replacing the battery pack:

- Wear rubber gloves and boots
- Remove rings, watches and other metal objects.
- Use tools with insulated handles.
- Do not lay tools or other metal objects on the batteries.
- If the battery kit is damaged in any way or shows signs of leakage, contact your local Emerson representative immediately.
- Do not dispose of batteries in a fire. The batteries may explode.
- Handle, transport and recycle batteries in accordance with local regulations.

**WARNING**

Although the Liebert GXT3 has been designed and manufactured to ensure personal safety, improper use can result in electrical shock or fire. To ensure safety, observe the following precautions:

- Turn Off and unplug the Liebert GXT3 before cleaning it.
- Clean the UPS with a dry cloth. Do not use liquid or aerosol cleaners.
- Never block or insert any objects into the ventilation holes or other openings of the UPS.
- Do not place the Liebert GXT3 power cord where it might be damaged.
ELECTROMAGNETIC COMPATIBILITY—The Liebert GXT3 complies with the limits for a Class A digital device, pursuant to Part 15 of FCC rules. Operation is subject to the following conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation. Operating this device in a residential area is likely to cause harmful interference that users must correct at their own expense.

The Liebert GXT3 series complies with the requirements of EMC Directive 2004/108/EC and the published technical standards. Continued compliance requires installation in accordance with these instructions and use of accessories approved by Emerson.

NOTICE

This is a product for restricted sales distribution to informed partners. Installation restrictions or additional measures may be needed to prevent radio interference.

Operate the UPS in an indoor environment only in an ambient temperature range of 0-40°C (32-104°F). Install it in a clean environment, free from moisture, flammable liquids, gases and corrosive substances.

The Liebert GXT3-5000RT208, Liebert GXT3-6000RT208 and the Liebert GXT3-6000RTL630 contain no user-serviceable parts except the internal battery pack. The Liebert GXT3-10000RT208 and the Liebert GXT3-8000RT208 contain no user-serviceable parts except the internal battery pack and the Power Module. The UPS On/Off push buttons do not electrically isolate internal parts. Under no circumstances attempt to gain access internally due to the risk of electric shock or burn.

Do not continue to use the UPS if the front panel indications are not in accordance with these operating instructions or the UPS performance alters in use. Refer all faults to your dealer.

Servicing of batteries should be performed or supervised by personnel knowledgeable of batteries and the required precautions. Keep unauthorized personnel away from the batteries. Proper disposal of batteries is required. Refer to your local laws and regulations for disposal requirements.

Never block or insert any object into the ventilation holes or other openings.

DO NOT CONNECT equipment that could overload the UPS or demand DC current from the UPS, for example: electric drills, vacuum cleaners, laser printers, hair dryers or any appliance using half-wave rectification.

Storing magnetic media on top of the UPS may result in data loss or corruption.

Turn Off and isolate the UPS before cleaning it. Use only a soft cloth, never liquid or aerosol cleaners.

Information for the Protection of the Environment

UPS SERVICING—This UPS makes use of components dangerous for the environment (electronic cards, electronic components). The components removed must be taken to specialized collection and disposal centers.

1.0 INTRODUCTION

Congratulations on your choice of the Liebert GXT3 uninterruptible power system (UPS). The Liebert GXT3 comes in nominal power ratings of 5000VA, 6000VA, 8000VA and 10,000VA. It is designed to provide conditioned power to microcomputers and other sensitive electronic equipment.

When it is generated, alternating current is clean and stable. However, during transmission and distribution it is subject to voltage sags, spikes and complete power failure that may interrupt computer operations, cause data loss and even damage equipment. The Liebert GXT3 protects equipment from these disturbances.

The Liebert GXT3 is a compact, on-line UPS. An on-line UPS continuously conditions and regulates its output voltage, whether utility power is present or not. It supplies connected equipment with clean, sinewave power. Sensitive electronic equipment operates best from sinewave power.

For ease of use, the Liebert GXT3 features a light-emitting diode (LED) display to indicate both load percentage and battery capacity. It also provides self-diagnostic tests, a combination ON/Alarm Silence/Manual Battery Test button, a Standby/Manual Bypass button and a configuration program.

The Liebert GXT3 has a Liebert IntelliSlot® port for communication between the UPS and a network server or other computer systems. This port provides detailed operating information including voltages, currents and alarm status to the host system when used in conjunction with Liebert MultiLink®. Liebert MultiLink can also remotely control UPS operation.
2.0 **SYSTEM DESCRIPTION**

2.1 **Transient Voltage Surge Suppression (TVSS) and EMI/RFI Filters**

These UPS components provide surge protection and filter both electromagnetic interference (EMI) and radio frequency interference (RFI). They minimize any surges or interference present in the utility line and keep the sensitive equipment protected.

2.2 **Rectifier/Power Factor Correction (PFC) Circuit**

In normal operation, the rectifier/power factor correction (PFC) circuit converts utility AC power to regulated DC power for use by the inverter while ensuring that the waveshape of the input current used by the UPS is near ideal. Extracting this sinewave input current achieves two objectives:

- The utility power is used as efficiently as possible by the UPS.
- The amount of distortion reflected on the utility is reduced.

This results in cleaner power being available to other devices in the building not being protected by the Liebert GXT3.

2.3 **Inverter**

In normal operation, the inverter utilizes the DC output of the power factor correction circuit and inverts it into precise, regulated sinewave AC power. Upon a utility power failure, the inverter receives its required energy from the battery through the DC-to-DC converter. In both modes of operation, the UPS inverter is on-line and continuously generating clean, precise, regulated AC output power.

2.4 **Battery Charger**

The battery charger utilizes energy from the utility power and precisely regulates it to continuously float charge the batteries. The batteries are being charged whenever the Liebert GXT3 is connected to utility power.

2.5 **DC-to-DC Converter**

The DC-to-DC converter utilizes energy from the battery system and raises the DC voltage to the optimum operating voltage for the inverter. This allows the inverter to operate continuously at its optimum efficiency and voltage, thus increasing reliability.
2.6 Battery

The Liebert GXT3 utilizes valve-regulated, nonspillable, lead acid batteries. To maintain battery design life, operate the UPS in an ambient temperature of 15°C to 25°C (59°F to 77°F). Optional external battery cabinets are available to extend battery run times. For run times, see Table 14.

2.7 Dynamic Bypass

The Liebert GXT3 provides an alternate path for utility power to the connected load in the unlikely event of a UPS malfunction. Should the UPS have an overload, overtemperature or any other UPS failure condition, the UPS automatically transfers the connected load to bypass. Bypass operation is indicated by an audible alarm and illuminated amber Bypass LED (other LEDs may be illuminated to indicate the diagnosed problem). To manually transfer the connected load from the inverter to bypass, press the Standby/Manual Bypass button once and hold it for about 2 seconds.

NOTE

The bypass power path does NOT protect the connected equipment from disturbances in the utility supply.
3.0 MAJOR COMPONENTS

The Liebert GXT3 is composed of three major assemblies to provide easier handling, installation and versatility.

3.1 Main Frame and Electronics

All models of the Liebert GXT3 are shipped without the internal batteries installed. Power distribution varies by model and rating.

- Liebert GXT3 5000 and 6000VA models ship with a basic hardwire distribution box attached and ready to be connected to the load (see Figure 2).
- Liebert GXT3RTL630 ships with a power distribution box attached (see Figure 4).
- Liebert GXT3 8000 and 10,000VA models with a cover plate installed over connections for any of several optional power distribution boxes (see Figure 5).

Figure 1 Liebert GXT3 front view—rack-mount and tower configurations

Figure 2 Liebert GXT3 5000VA and 6000VA rear view

Figure 3 Input power hardwire boxes—5000 and 6000VA models

NOTE

Hardwire and hardwire/receptacle boxes that include a manual bypass switch permit AC power to continue to flow from the utility input to the load while the box is removed from the UPS. For details, refer to 3.2 - Removable Power Distribution Box.

3.3 Internal Battery Packs

The UPS has two internal battery packs behind a battery access door on the front of the unit. Each internal battery pack is fitted with a connector to link to the UPS.

Figure 7  Power distribution models for 8000VA and 10,000VA models of Liebert GXT3

similar features on other
distribution boxes arranged differently

Figure 8  Internal battery pack features

Liebert GXT3 8000 and 10,000VA
battery packs shown;
5000 and 6000VA battery packs
have same features
4.0 WHAT’S INCLUDED

The Liebert GXT3 is shipped with the following items:

- Terminal Block Communication terminals
- Compact disc with:
  - Liebert MultiLink
  - Configuration program
  - User manual (electronic version)
- USB cable, one; 2m (6-1/2 ft.) long
- Rack handles with mounting hardware
- Power Distribution Box, installed on Liebert GXT3
- Plastic tower set, one
- Warnings, safety instructions booklet and WEEE recycling sheet (ISO 14001 compliance)

NOTE

*The Liebert GXT3 External Battery Cabinet shipping package includes one battery cabinet, two spacers for the 5000 and 6000VA models and four spacers for the 8000 and 10000VA models for tower configuration and one DC power cable.*
5.0 INSTALLATION AND CONFIGURATION

Do NOT attempt to start the UPS, turn on any circuit breaker or energize the input power until instructed to do so in 8.2 - Initial Startup and Electrical Checks.

Visually inspect the UPS for shipping damage. Report any damage to the carrier and your local dealer or Emerson representative.

⚠️ CAUTION

The UPS is heavy (see 12.0 - Specifications). Take proper precautions when lifting or moving it.

Install the Liebert GXT3 indoors in a controlled environment, where it cannot be accidentally turned off. Place it where air flows unrestricted around the unit. The installation location must be free of water, flammable liquids, gases, corrosives and conductive contaminants. Maintain a minimum clearance of 100mm (4 inches) in the front and rear of the UPS. Maintain an ambient temperature range of 0 to 40°C (32 -104°F).

NOTE

UPS operation in sustained temperatures outside the range of 15-25°C (59°-77°F) reduces battery life.

5.1 Install the Main Cabinet

The Liebert GXT3 may be installed in either a tower configuration or in a rack, depending on available space and use considerations. Determine the type of installation and follow the appropriate instructions in either 5.1.1 - Tower UPS Installation or 5.1.2 - Rack-Mount UPS Installation.

5.1.1 Tower UPS Installation

To install the Liebert GXT3 as a tower:

1. Take the support bases out of the accessories bag (see Figure 9).

Figure 9  Support bases

2. If optional Liebert external battery cabinets will be connected to the Liebert GXT3, take out the spacers shipped with the battery cabinet.

3. Connect the spacers and the support bases as shown in Figure 9. Each Liebert GXT3 needs two assembled support bases, one in the front and one in the rear.

4. Adjust the direction of the operation and display panel and logo on the Liebert GXT3.
   a. Remove the front plastic bezel cover as shown in Figure 10.

Figure 10  Remove the front plastic bezel cover
b. Pull the operation and display panel gently, rotate it 90 degrees clockwise and snap it back into position, as shown in Figure 11.

Figure 11 Rotate the operation and display panel

![Operation and Display Panel Rotated Clockwise 90 Degrees]

b. Pull the operation and display panel gently, rotate it 90 degrees clockwise and snap it back into position, as shown in Figure 11.

c. Pull the logo on the front plastic bezel cover gently, rotate it 90 degrees clockwise and snap it back into position. The rotated front plastic bezel cover is shown in Figure 11.

d. Replace the front plastic bezel cover on the Liebert GXT3. At this point, the UPS operation and display panel and logo have been rotated 90 degrees clockwise, which provides upright viewing for users.

5. Place the Liebert GXT3 and any battery cabinets on the support bases. Each Liebert GXT3 needs two support assemblies, as shown in the lower half of Figure 1.

5.1.2 Rack-Mount UPS Installation

When using the Liebert GXT3 in a rack, the UPS must be supported by a slide kit, fixed rails or a shelf.

When using the optional Adjustable Rack Mount Kit, you will use the following instructions. The figures accompanying 5.1.3 - Installing the Adjustable Rack-Mount Kit—Sold Separately shows the positioning of the rack-mounting brackets. Emerson recommends taking the internal batteries out of the UPS during rack installation. This will make the UPS cabinet lighter and easier to handle.

![CAUTION]
The Liebert GXT3 is heavy; see 12.0 - Specifications. The UPS must be installed as near the bottom of a rack as possible. If placed too high, it can make the rack top-heavy and prone to tipping over.

5.1.3 Installing the Adjustable Rack-Mount Kit—Sold Separately

This kit contains parts needed to mount several different models of UPS and external battery cabinets into EIA310-D standard four-post racks that are 18-32" deep (457-813mm). The weight limit per pair of adjustable rack-mounting brackets is 91 kg (200lb).

Parts included are:

<table>
<thead>
<tr>
<th>Item</th>
<th>Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rear bracket members</td>
<td>2</td>
</tr>
<tr>
<td>Front bracket members</td>
<td>2</td>
</tr>
<tr>
<td>Inner bracket members</td>
<td>2</td>
</tr>
<tr>
<td>M4 machine screws</td>
<td>16</td>
</tr>
<tr>
<td>M4 locking hex nuts</td>
<td>8</td>
</tr>
<tr>
<td>M5 machine screws</td>
<td>8</td>
</tr>
</tbody>
</table>

Tools needed for installation are:
- one Phillips screwdriver
- one 7mm wrench
The adjustable rack-mounting brackets (Part#: RMKIT18-32) feature retaining latches to prevent users from inadvertently sliding the UPS or battery cabinet out of the rack.

To install the rack mount brackets:

1. Unpack two rack-mounting bracket assemblies and mounting hardware from this kit. Bracket assemblies are interchangeable between left-hand or right-hand. Remove inner member of each bracket assembly as shown at right by extending it to its outermost position, depressing the retaining latch and then pulling the inner member out of the bracket assembly.

2. Determine the height position inside the rack enclosure where you want to mount the UPS or battery cabinet.

**CAUTION**
Reduce the risk of tipping the rack enclosure by placing the UPS or battery cabinet in the lowest possible rack position.

3. Install the rear member of each bracket assembly into the rack enclosure with two M5 screws provided in this kit (see figure at right). The return flanges on the bracket assembly fit to the inside of rack mounting rails. Insert screws loosely (finger-tight) into the top and bottom holes of the return flange on the rear member. Extend the bracket assembly by sliding the front member forward until it touches the front rack mounting rail. Insert two M5 screws loosely (finger-tight) into the top and bottom holes of the return flange on each front member. Make sure that the bracket assemblies are at the same mounting height on all four (4) rack mounting rails.

4. Get eight M4 screws and eight M4 nuts from the hardware pack in this kit. Each nut has a locking, nylon insert that begins gripping the screw when it is halfway tight. Make sure to tighten the nut and screw completely to ensure locking action. Fasten the rear member and the front member together using four screws and four nuts per bracket assembly as shown in at right. For maximum support, insert fasteners for each bracket assembly as far apart as possible, depending on rack depth, while still joining both members (see figures at right). Check alignment of bracket assemblies and TIGHTEN ALL SCREWS FROM **Steps 2** and 3.

5. Prepare the UPS or battery cabinet (the “equipment”) for rack mounting by following instructions in the equipment’s user manual. The equipment may require additional parts to be added or parts to be removed for rack mounting. After it is prepared, lay the equipment in rack-mounting position. Fasten the inner members from **Step 1** to the equipment on both sides as shown at right with eight M4 screws provided in the kit. Make sure retaining latch is near the rear of the equipment as shown (see figure at right).
6. If available, apply a bead of grease 1" (25mm) long at four places inside the bottom, curved tracks of the front members as shown below right. The grease will allow the equipment to slide into the bracket assemblies more easily.

**CAUTION**

Lifting equipment into the rack may be a two-person job, depending on the weight of the equipment. Liebert recommends taking the internal batteries out of the UPS during rack installation. This will make the UPS cabinet lighter and easier to handle. The Liebert GXT3 weighs 151 lb. (67kg). For the weight of the UPS, see Table 7; for the battery cabinet’s weight, see Table 11.

Factory-supplied rack handles are not intended to be used to lift the UPS. The handles are intended to be used to slide the UPS into and out of the rack.

7. Insert the equipment, with inner members attached in Step 5, into the bracket assemblies by inserting the top and bottom edges of the inner members into the top and bottom curved tracks of the front members and sliding the equipment into the rack (see figure at right). Ends of inner members are tapered to allow the rear of the equipment to be angled upward before insertion, if space allows.

Then the rear, bottom edges of the inner members can be placed into the front edge of the bottom tracks and the front of the equipment can be tipped up so they are level to insert the top edges of the inner members before sliding the equipment into the rack (see figure above right). The equipment should move smoothly into the bracket assemblies. If it does not, recheck the alignment of the front and rear members from Steps 2 and 3.

8. Secure the front of the equipment to the rack mounting rails to prevent the equipment from sliding out of position. If securing holes are provided on the front of the equipment that align with the center holes on the return flange of the front members, you can use the four extra M5 screws provided in the kit to secure the equipment. Otherwise, the equipment should be secured to the front of the rack with four customer-supplied fasteners.
5.2 External Battery Cabinet Installation

**WARNING**
Risk of electric shock. Can cause injury or death.
Disconnect all local and remote electric power supplies before working within.
Ensure that the Liebert GXT3 is shut down and power has been disconnected before beginning any work on or in the unit.

**CAUTION**
The external battery cabinet(s) are heavy (see Table 11). Take proper precautions when lifting them.
Optional Liebert external battery cabinets may be connected to the UPS to provide additional battery run time. External battery cabinets are designed to be placed on one side of the UPS in a tower configuration or stacked beneath the UPS in a rack configuration.

Figure 12 External battery cabinets connected to 6000VA Liebert GXT3

1. Inspect the external battery cabinet for freight damage. Report damage to the carrier and your local dealer or Emerson representative.
2. Optional rack-mount handles are shipped with the external battery cabinet and may be installed at this time if desired.
3. Securing hardware and slide rails are sold separately. Please contact your local dealer or Emerson representative for these additional options and any assistance needed. Fasten the slides into position with the screws per the instructions included with the slide rails.
4. Use the enclosed support bases for the tower option to prevent tip-over. One additional set of support base extensions ships with each external battery cabinet.
5. Put the UPS in Bypass Mode by pressing the bypass button on the front of the unit and holding it about 2 seconds.
6. Verify the External Battery Cabinet breaker is in the Off position.
7. Connect the supplied external battery cabinet cable to the rear of the external battery cabinet, then to the rear of the UPS.
8. Turn the External Battery Cabinet breaker to the On position.
9. Press the On button on the front of the UPS for 4 seconds to return the unit to Inverter Mode.
10. Verify the circuit breaker on the External Battery Cabinet is in the On position.
11. Use the included configuration program to program the UPS for the number of external battery cabinets connected. Instructions for the configuration program are in 6.0 - Configuration Program.
12. The UPS is now equipped with additional backup battery run time. For approximate battery run times, refer to Table 14.

**NOTE**
*When removing the External Battery Cabinet, the circuit breaker on the rear of the cabinet must be turned off before disconnecting the cable.*
5.3 Connect Input/Output Power

**WARNING**
Risk of electric shock. Can cause injury or death.

Disconnect all local and remote electric power supplies before working within. Ensure that the Liebert GXT3 is shut down and power has been disconnected before beginning any work on or in the unit.

The Liebert GXT3-5000RT208, Liebert GXT3-6000RT208 and Liebert GXT3-6000RTL630 are shipped with a power distribution box attached. The Liebert GXT3-8000RT208 and Liebert GXT3-10000RT208 are shipped with a cover plate over the power distribution connector.

Follow the instructions below for removal and installation.

**NOTE**
*Do not operate the UPS with the power distribution box removed. To shut off all power to this box and to the load, utility input power must be disconnected.*

5.3.1 Remove the Power Distribution Box from 5000 and 6000VA Models

1. Put the Liebert GXT3 in maintenance bypass by pressing the Standby/Manual Bypass button while the UPS is in Utility (AC) Mode and holding the button for about 2 seconds. (For help, refer to 8.4 - Put the Liebert GXT3 in Manual Bypass.)

2. Loosen the captive screw over the maintenance bypass breaker (see Figure 13 for the breaker’s location).

3. Turn the maintenance bypass breaker On.

**NOTICE**
The load is unprotected from disturbances in the power supply while the UPS is on bypass.

4. Turn the output and input breakers Off.

5. Loosen other captive screws until the power distribution box releases.

6. Remove the power distribution box from the UPS and set it aside.

7. Loosen the screws over the plastic cover for the connector on the rear of the panel.

8. Slide the plastic cover over the connector and tighten the screws.

**Figure 13** Power distribution box removal from 5000 and 6000VA models
5.3.2 Remove the Power Distribution Cover from 8000 and 10,000VA Models

1. Shut down the Liebert GXT3 by pressing the Standby/Manual Bypass button twice while the UPS is in Bypass Mode, each time holding the button down for about 2 seconds. (For help, refer to 8.5 - Shut Down the Liebert GXT3.)

2. Loosen the captive screw over the maintenance bypass breaker (see Figure 5 for the breaker’s location).

3. Turn the maintenance bypass breaker On.

**NOTICE**

The load is unprotected from disturbances in the power supply while the UPS is on bypass.

4. Turn the output and input breakers Off.

5. Support the power distribution box and remove the two screws at the top of the box.

6. Remove the cover or power distribution box from the UPS and set it aside.

7. If removing a power distribution box, carefully pull apart the power distribution box connector and the UPS connector.

**Figure 14 Power distribution box removal from 8000 and 10,000VA models**

5.3.3 Install the Power Distribution Box on 5000 and 6000VA Models

1. Align the connectors and press the power distribution box onto the UPS.

2. Hold the box firmly against the UPS and tighten the captive screws except the one over the maintenance bypass breaker.

3. Turn the output and input breakers On.

4. Start the UPS according to startup instructions.

5. Verify that the UPS lamp is illuminated.

6. Turn the maintenance bypass breaker Off.

7. Insert the maintenance bypass cover behind the captive screw and tighten the screw.

**NOTE**

The maintenance bypass breaker cover must be installed behind the captive screw and the screw must be tightened for the UPS to operate in inverter mode.
5.3.4 Install the Power Distribution Box on 8000 and 10,000VA Models

1. With the cover or distribution box removed, press the UPS and distribution box connectors together. Ensure that the connectors are fully seated.
2. Align the screw holes and press the power distribution box onto the UPS, making sure that the tabs at the bottom of the box fit into the slots on the UPS.
3. Attach the box to the UPS by installing screws into the two holes at the top of the box.
4. Tighten the screws.
5. Turn the output and input breakers On.
6. Start the UPS according to startup instructions.
7. Verify that the UPS lamp is illuminated.

5.3.5 Distribution Box Electrical Connections

Electrical connections are made through a removable power distribution box that attaches to the rear of the UPS.

- PD2-HDWR, PD2-HDWR-MBS, PD2-001, PD2-002, PD2-003, PD2-004, PD2-005 and PD2-006 models fit the 5000 and 6000VA models of the Liebert GXT3
- PD2-L630 fits the GXT3-6000RTL630
- PD2-101, PD2-102, PD2-103, PD2-104, PD2-105 and PD2-106 models fit the 8000 and 10,000VA models of the Liebert GXT3

The installer must provide an upstream branch circuit breaker. The input circuit breaker on the distribution box and the output circuit breaker on the rear of the power distribution box disconnect all power between the main cabinet and the distribution box.

Models equipped with a manual bypass breaker pass bypass power directly to the bypass breaker from the input terminal block. The input circuit breaker on the distribution box does not disconnect power from the manual bypass breaker.

NOTE
1. Emerson recommends installing a UL489-approved breaker upstream of unit.
2. The installer must provide circuit breaker protection according to local codes. The utility disconnect should be within sight of the UPS or have appropriate an appropriate lock-out. Maintain service space around the UPS or use flexible conduit.
3. The installer must provide output distribution panels, circuit breaker protection or emergency disconnects according to local codes. Output circuits must not share a common conduit with any other wiring.
5.4 IT Power System Configuration—Liebert GXT3-6000RTL630 Only

![Image of IT Power System Connectors compartment]

**WARNING**
Risk of electric shock. Can cause injury or death.

Disconnect all local and remote electric power supplies before working within. Ensure that the Liebert GXT3 is shut down and power has been disconnected before beginning any work on or in the unit.

1. Remove screws on the IT Power System Access Cover as shown in Figure 17.
2. Disconnect the connectors as shown in figure.

**Figure 17** Remove cover from IT Power System Connectors compartment
6.0 **Configuration Program**

The final step of installation may require custom configuration of your UPS using the enclosed configuration program. Some configuration settings may be changed only while the UPS is off. These should be set before the UPS is put into full-time service powering the critical load.

For most users operating with 230VAC and with no external batteries, the factory default settings will be adequate.

6.1 **Configuration Program Features**

- Select L-N output voltages to match local voltages.
- Enable/Disable Auto-Restart.
- Select frequency converter operation with a fixed output frequency of 50 or 60 Hz.
- Set the Low Battery Warning alarm time from 2 to 30 minutes.
- Enable/Disable the Auto-Battery test.
- Set the Auto-Battery test to 7, 14, 21 or 28 days.
- Specify the number of external battery cabinets connected to the UPS to adjust the remaining run time calculations reported by Liebert software products.
- Modify the shutdown setting of the terminal block (for information on pin assignments, see Table 2).

6.1.1 **What You Will Need**

In addition to the Liebert GXT3 UPS, you will need the configuration program CD and USB cable included in the UPS accessory box. A Windows 95® or later computer, desktop or laptop, is also required to set up and run the configuration program.
7.0 **CONTROLS AND INDICATORS**

Figure 18 Liebert GXT3 control panel

**7.1 ON/Alarm Silence/Manual Battery Test Button**

This button controls output power to connected load(s) and has three functions:

- **ON**
- **Alarm Silence**
- **Manual Battery Test**

**ON** - Pressing this button for four seconds will start the UPS.

**Alarm Silence** - To silence alarms, press this button for at least one second. After the alarm is silenced, the Liebert GXT3 will reactivate the alarm system to alert of additional problems.

**NOTE**

_The LOW BATTERY and BYPASS reminder alarms CANNOT be silenced._

**Manual Battery Test** - To initiate a manual battery test, press the ON button for at least one second while operating from utility power with no alarm conditions present.

- If only three of the five Battery LEDs illuminate, allow the UPS to recharge the batteries for 24 hours.
- After 24 hours, retest the batteries.
- After the batteries have been retested, if only three of the five Battery LEDs illuminate, contact your local dealer, Emerson representative or Emerson Channel Support.

**7.2 Standby/Manual Bypass Button**

This button controls output power to connected load(s) and has dual functions: Standby and Manual Bypass.

**NOTICE**

Pressing the Standby/Manual Bypass button once will transfer the load to bypass power and the load will be unprotected from disturbances in utility supply. Pressing the Standby/Manual Bypass button twice within 4 seconds while on Bypass will cut off power to the output sockets and connected loads. Perform all necessary shutdown procedures on connected loads before pressing this button twice.
7.3 Load Level Indicators (4 Green, 1 Amber)

The load level indicator is composed of five sets of LED bars that illuminate to indicate the relative load on the UPS output in 25% increments (±5%). The load level indicator will illuminate as shown in Figure 19.

The load level indicators display the approximate electrical load placed upon the UPS at all times.

Figure 19 Load level indicators

7.4 Battery Level Indicators (5 Green)

The battery level indicator is composed of five sets of LED bars that illuminate and flash to indicate the battery capacity level. The Liebert GXT3 battery capacity level is shown in 20% increments (±5%). The battery level indicators will illuminate as shown in Figure 20

The battery level indicators display approximate battery capacity at all times.

The Liebert GXT3 is equipped with automatic and remote battery test features. The default setting is for the automatic test to occur every 14 days (this option is user-configurable) if utility power has not been interrupted. Should the battery fail this test, the red Fault indicator LED along with the A and C diagnostic LEDs will illuminate and an alarm will sound (refer to 11.0 - Troubleshooting). The remote test feature functions with Liebert MultiLink and can remotely initiate the battery test.

Figure 20 Battery level indicators
7.5 UPS Status Indicators

UPS status is indicated by five symbols: fault indicator, AC input indicator, battery indicator, inverter indicator and bypass indicator. Table 3 shows the symbols and their meanings.

Table 3 UPS status indicators

<table>

</tbody>
</table>
8.0 **Operation**

This section describes checks to be made before starting the UPS, how to start the UPS, manual battery test, manual bypass, shutting down the UPS and disconnecting the utility power from the UPS.

**NOTE**

The Liebert GXT3’s battery has been fully charged before delivery, but some charge will be lost during storage and shipping. To ensure that the battery has adequate reserve power to protect the connected load, charge the battery for three hours before putting the UPS into service.

8.1 **Startup Checklist for the Liebert GXT3**

Before starting the UPS, perform these checks:

___ 1. Check that the input plugs and loads are connected properly and reliably.
___ 2. Check that the battery cable is connected properly.
___ 3. Check that the communication cables are connected properly.

8.2 **Initial Startup and Electrical Checks**

1. Verify that the Input/Output circuit breakers are off.
2. During initial system checks, disconnect all loads (open load disconnects).
3. Inspect all wiring, cables and connection.
4. If external battery cabinets are used, verify that the battery interconnect cables are fully inserted in the sockets.
5. Place the manual bypass breaker in BYPASS position.
6. Turn on the branch circuit disconnect to apply voltage to the input terminal block.
7. Using a voltmeter, verify the expected L1-N (L2) voltage. Verify that the same voltages appear at the Output terminals. The Bypass lamp by the switch will light.
8. After verifying proper input voltage to the UPS terminal block, turn off the branch circuit power, close all access panels to the distribution box and reapply input power.
9. Close the Input circuit breaker located on the distribution box. The green AC INPUT lamp should illuminate on the front panel.
10. Press the ON button and hold it for four seconds. After several seconds, the UPS ON lamp will turn on continuously. If the batteries are determined to be charged above 80%, an automatic battery test will run for about 15 seconds.
11. Close the Output circuit breaker on the rear of the power distribution box. The light by the input breaker will illuminate.
12. Return the breaker to the Inverter position. The output terminal block will be powered at this time.
13. Connect all loads for normal operation.
8.3 Manual Battery Test

To initiate a manual battery test, press the On/Alarm Silence/Manual Battery Test button for at least half a second while the UPS is operating from utility power with no alarm conditions present.

- If only the first two of the five LED segments illuminate, allow the UPS to recharge the batteries for 24 hours.
- Retest the batteries after 24 hours of charging.
- After the batteries have been retested, if only two of the five Battery LEDs illuminate, contact your local Emerson representative or Emerson Network Power Channel Support.
- If none of the five Battery LEDs illuminate during a manual battery test, check the battery connection and allow the UPS to recharge the batteries for 1 hour, then initiate a manual battery test again.
- If none of the five Battery LEDs illuminate during the second manual battery test, replace batteries and contact your local Emerson representative or Emerson Channel Support.

8.4 Put the Liebert GXT3 in Manual Bypass

Press the Standby/Manual Bypass button and hold it for about 2 seconds while the UPS is in Utility (AC) Mode. The UPS will transfer the connected loads to the internal bypass. If the internal bypass is not available because of utility power problems, pressing this button once will be ignored. Bypass operation is indicated by an audible alarm and illuminated amber Bypass indicator. (If other indicators are illuminated, refer to 11.0 - Troubleshooting.)

8.5 Shut Down the Liebert GXT3

1. Transfer the UPS to manual bypass by pressing the Standby/Manual Bypass button and holding it for about 2 seconds.
   If manual bypass is not available, disregard the first step.
2. Press the Standby/Manual Bypass button twice within four seconds, each time holding it for about two seconds.

Power to the connected loads is now Off.

8.6 Disconnecting Input Power from the Liebert GXT3

1. After the UPS has been shut down as detailed in 8.5 - Shut Down the Liebert GXT3, turn off the Output Circuit Breaker.
2. Wait 30 seconds and verify that all indicators have turned Off and the fan has stopped; this indicates that the power-off is complete.
3. Turn the external battery cabinet breaker switch to the Off position if the UPS has an external battery cabinet.

After powering off the UPS, the UPS ceases output and the load is powered Off.

8.7 Maintenance Bypass

Maintenance Bypass Mode is used when maintenance or replacement is required. To place the unit in Maintenance Bypass:

1. Place the UPS on internal bypass. This may be done by either of the following methods:
   a. Press the Off button on the front panel one time.
   b. Slide the bracket away from the manual bypass breaker on the rear of the UPS. This requires loosening the captive screw and sliding the bracket up and away from the Manual Bypass breaker.
2. Move the Manual Bypass breaker on the rear of the UPS to the bypass position. This requires loosening the captive screw and sliding the bracket up and away from the Manual Bypass breaker.
9.0 COMMUNICATION

9.1 Communication Interface Port
The Liebert GXT3 UPS has a terminal block on the rear of the UPS unit. Several signals are provided on this port and are assigned as follows.

9.2 Terminal Block
The terminal block includes eight pins, as shown in Figure 21.

Figure 21 Terminal block communication pin layout

9.2.1 Any-Mode Shutdown
The purpose of Any Mode Shutdown is to shut down the UPS output by turning Off the rectifier, inverter and static switch so that there is no power to the loads.

Any Mode Shutdown can be operated locally or remotely:

- Local Any Mode Shutdown can be performed by shorting the pins in Set 3.
- Remote Any Mode Shutdown can be performed using a switch connected to the pins in Set 3 and mounted at a remote location.

Activation of the Any Mode Shutdown will be logged as an event in the event history log.

**NOTE**
Remote Power Off will be performed either by NO or NC contact of Any Mode Shutdown. The current limited source for the optocoupler (+12VDC, 50mA) will be available from UPS. The connection to UPS for remote connection will be via terminal block connector.
Any Mode Shutdown wiring must conform to all national, regional and local wiring codes and laws.

**WARNING**
When the Auto-enable output option is selected and the UPS output is disabled using the pins in Set 3, the Liebert GXT3’s output can turn On automatically and without warning if the connection of the pins in Set 3 is changed.

9.2.2 Battery Mode Shutdown
Battery Mode Shutdown permits shutting down the UPS by turning off the rectifier, inverter and static switch so that there is no power to the load when the UPS is On Battery. The auxiliary power for the UPS will still be active.

Battery Mode Shutdown can be performed locally or remotely:

- Local Battery Mode shutdown can be performed by shorting the pins in Set 4.
- Remote Battery Mode Shutdown can be performed using a switch connected to the pins in Set 4 and mounted at remote location.
Activation of the Battery Mode Shutdown will be logged as an event in the event history log.

**NOTE**
Remote Power Off will be performed by NO contact.
The current limited source for the optocoupler (+12VDC, 50mA) will be available from UPS.
The connection to the Liebert GXT3 for remote connection will be via terminal block connector.
Battery Mode Shutdown wiring must conform to all national, regional and local wiring codes and laws.

This signal must last for 1.5 seconds or longer.

A battery shutdown signal will not cause an immediate shutdown. It will start a 2-minute shutdown timer. This timer cannot be stopped once triggered. If the utility power returns during this countdown, the Liebert GXT3 will still shut down and must remain shut down for 10 seconds. Whether the UPS turns back On when the power is restored depends on the auto-restart setting.

### 9.2.3 On Battery

On Battery signal is a Normally Open (NO) dry contact. When the UPS is supplying output power from the battery this dry contact will be closed.

### 9.2.4 Low Battery

Low Battery signal is a Normally Open (NO) dry contact. When the UPS is supplying output power from the battery and has reached the Low Battery Warning time selected in the configuration program, this dry contact will be closed.

**NOTE**
The rated values for the dry contacts for the On Battery and Low Battery signals are:
- Rated Voltage: 5V
- Working Voltage Range: 4.5-10V
- Rated Current: 30ma

### 9.3 UPS IntelliSlot Communication Cards

The Liebert IntelliSlot port accepts three optional cards:
- Liebert IntelliSlot SNMP Card
- Liebert IntelliSlot Relay Card
- Liebert IntelliSlot 485 Card.

The Liebert IntelliSlot SNMP Card provides SNMP monitoring and control of the UPS across the network.

The Liebert IntelliSlot Relay Card provides dry contact relay outputs for custom-wired applications and delivers support for built-in shutdown for AS/400 systems.

The Liebert IntelliSlot 485 Card is used to connect the UPS and computer system.

Follow instructions provided with the Liebert IntelliSlot card to configure Liebert MultiLink, the UPS or any additional ancillary product for the Liebert GXT3. These instructions are available at [multilink.liebert.com](http://multilink.liebert.com)
9.3.1 **Liebert MultiLink**

Liebert MultiLink monitors the UPS continuously and can shut down a computer or server in the event of an extended power failure.

Liebert MultiLink can also be configured for use without the USB cable when the Liebert IntelliSlot SNMP/Web card is installed in the UPS. Additionally, Liebert MultiLink can be configured to coordinate shutdown across the network with other computers running Liebert MultiLink when you purchase a Liebert MultiLink License Kit. For more information about the Liebert IntelliSlot SNMP/Web Card and Liebert MultiLink License Kits, visit our Web site (www.liebert.com) or contact your local dealer or Emerson representative.

Several option cards are available for use in the Liebert IntelliSlot port of the Liebert GXT3. The Liebert IntelliSlot SNMP/Web Card provides SNMP and Web-based monitoring and control of the UPS across the network.

The Liebert IntelliSlot MultiPort 4 Card allows installing Liebert MultiLink software on four computers and coordinate shutdown in the event of a power failure.

The Liebert IntelliSlot Relay Card provides dry contact relay outputs for custom wired applications and delivers support for built-in shutdown for AS/400 systems.

⚠️ **CAUTION**

To maintain safety (SELV) barriers and for electromagnetic compatibility, signal cables should be shielded and run separate from all other power cables, where applicable.

9.4 **Remote Emergency Power Off**

The UPS is equipped with a Remote Emergency Power Off (REPO) connector.

The user must supply a means of interfacing with the REPO circuit to allow disconnecting the UPS input feeder breaker to remove all sources of power to the UPS and connected equipment to comply with national and local wiring codes and regulations.

**REPO switch connection diagram**

Opening the REPO connection will disable the UPS. Manual restart using the front panel is required after the REPO connection is closed again.

⚠️ **CAUTION**

To maintain safety (SELV) barriers and electromagnetic compatibility, signal cables should be shielded and run separately from power cables.
10.0 MAINTENANCE

This section describes replacing the internal battery pack, precautions, checking the Liebert GXT3’s status and checking UPS functions.

10.1 Replacing the Internal Battery Pack

The Liebert GXT3 is designed to allow the user to replace the internal battery pack safely. Read the safety cautions before proceeding. Contact your local dealer or Emerson representative to obtain the part number and pricing of the appropriate replacement battery pack.

10.1.1 Battery Replacement Procedures

1. Gently remove the front plastic bezel cover from the UPS.
2. Loosen and remove the six screws on the battery door, as shown in Figure 22.
3. Lay the battery door and screws aside for reassembly.

Figure 22 Removing the front plastic bezel cover and battery door

4. Gently pull the battery wires out and disconnect the battery plugs and battery receptacles, as shown in Figure 23.

Figure 23 Disconnecting the battery plug and battery receptacle (front view)

5. Grasp the battery handle and pull one of the internal battery packs out of the UPS, as shown in Figure 24.

Repeat this step if both battery packs will be replaced. Each model has two battery packs.
6. Unpack a new internal battery pack. Take care not to destroy the packing.
   Compare the new and old internal battery packs to make sure they are the same type and model.
   If they are the same, proceed with Step 7; if they are different, stop and contact your local Emerson representative or Emerson Channel Support.

7. Line up and slide in the new internal battery pack.
8. Repeat Steps 6 and 7 if replacing both battery packs. Each model has two battery packs
9. Reconnect the battery plugs and battery receptacles.
10. Gently push the battery wire into the UPS battery compartment.
11. Reattach the front battery door with the six screws.
12. Reattach the front plastic bezel cover to the UPS.

   **NOTE**
   The internal battery pack is hot-swappable. However, caution should be exercised because the load is unprotected from disturbances and power failures during this procedure. Do not replace the battery while the UPS is operating in Battery Mode. This will result in a loss of output power and will drop the connected load.

10.2 Battery Charging
The batteries are valve-regulated, nonspillable, lead acid and should be kept charged to attain their design life. The Liebert GXT3 charges the batteries continuously when it is connected to the utility input power.

If the Liebert GXT3 will be stored for a long time, Emerson recommends connecting the UPS to input power for at least 24 hours every four to six months to ensure full recharge of the batteries.

10.3 Precautions
Although the Liebert GXT3 has been designed and manufactured to ensure personal safety, improper use can result in electrical shock or fire. To ensure safety, observe the following precautions:

- Turn Off and unplug the Liebert GXT3 before cleaning it.
- Wear rubber gloves and boots.
- Clean the UPS with a dry cloth. Do not use liquid or aerosol cleaners.
- Never block or insert any objects into the ventilation holes or other openings of the UPS.
- Do not place the Liebert GXT3 power cord where it might be damaged.
10.4 Checking UPS Status

Emerson recommends checking the UPS operation status every six months.

- Check whether the UPS is faulty: Is the Fault Indicator on? Is the UPS sounding an alarm?
- Check whether the UPS is operating in Bypass Mode. Normally, the UPS operates in Normal Mode. If it is operating in Bypass Mode, stop and contact your local Emerson representative, or Emerson Channel Support.
- Check whether the battery is discharging. When the utility input is normal, the battery should not discharge. If the UPS is operating in Battery Mode, stop and contact your local Emerson representative or Emerson Channel Support.

10.5 Checking UPS Functions

**NOTE**

*UPS function check procedures may interrupt power supply to the connected load.*

Emerson recommends checking the UPS functions once every six months.

Back up the load data before conducting the UPS functions check. Procedures are as follows:

1. Press the Standby/Manual Bypass button to check whether the buzzer and indicators are normal.
2. Press the On/Alarm Silence/Manual Battery Test button to check again whether the indicators are on and the UPS is operating normally.
3. Press the On/Alarm Silence/Manual Battery Test button for three seconds after Inverter Mode. The UPS should initiate a battery self-test. Check to determine whether the battery is operating normally. If not, stop and contact your local Emerson representative or Emerson Channel Support.

10.6 Replacing the Power Module on 8000 and 10,000VA models

**CAUTION**

The UPS must be switched to manual bypass before personnel begin to replace the power module.

**NOTICE**

During the procedure, the connected load will not be protected from power disturbances, such as spikes, sags and failure.

To remove the UPS power module without shutting off power to the connected load:

1. Place the UPS on internal bypass. This may be done by any of the three following methods:
   a. Press the Off button on the front panel one time.
   b. Slide the bracket away from the manual bypass switch on the rear of the UPS; this requires loosening the captive screw and sliding the bracket away from the manual bypass switch.
   c. Remove the front grille covering the power module.
2. Move the manual bypass breaker on the rear of the UPS to the bypass position; this requires loosening the captive screw and sliding the bracket away from the manual bypass switch (see Figure 7).
3. Open the input circuit breaker on the rear of the UPS (see Figure 7).
4. Open the output circuit breaker on the rear of the UPS (see Figure 7).
5. Remove the top two front plastic bezels by pulling them forward.
6. Remove the power module cover grille and the battery cover grille with the screws securing them to the frame.
7. Disconnect the slotted battery connectors from the internal battery packs.
8. If additional external batteries are used, disconnect the two external battery connectors.
9. Slide power module restraint lever up out of the locked position.
10. Slide the power module out the front, supporting its weight as it is withdrawn.
11. Insert the replacement UPS power module.
12. Slide the power module restraint lever back into the locked position.
13. Reconnect the slotted internal battery connectors.
14. Reconnect the external battery cables, if used.
15. Reattach both front cover grilles.
16. Reattach the front plastic bezels.
17. Close the input circuit breaker on the rear of the UPS (see Figure 7).
18. Close the output circuit breaker on the rear of the UPS (see Figure 7).
19. Move the bypass breaker on the rear of the UPS back to the INVERTER position (see Figure 7).
20. Slide the bracket back next to the manual bypass breaker and tighten its thumbscrew.
21. Press the On button on the front panel one time to return the UPS to Normal Mode operation (see Figure 18).

**NOTE**

The power module restraint lever must be fully engaged for the UPS to operate in Normal Mode.
11.0 TROUBLESHOOTING

This section indicates various UPS symptoms a user may encounter and provides a troubleshooting guide in the event the UPS develops a problem. Use the following information to determine whether external factors caused the problem and how to remedy the situation.

11.1 UPS Symptoms

The following symptoms indicate the Liebert GXT3 is malfunctioning:

- The relative indicators illuminate, indicating the UPS has detected a problem.
- An alarm buzzer sounds, alerting the user that the UPS requires attention.

11.1.1 Indicators

In addition to the fault indicator being illuminated, one or more of LED segments of battery level indicator will also be illuminated to provide a diagnostic aid to the user, as shown in Figure 26. The descriptions are listed in Table 4.

Figure 26 Battery level indicator

Table 4 Indicator descriptions

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Diagnosis/Audible alarm</th>
</tr>
</thead>
<tbody>
<tr>
<td>A - E</td>
<td>On bypass from output overload (half-second beep every half-second)</td>
</tr>
<tr>
<td>A</td>
<td>On bypass due to overtemperature condition (1-second beep every 4 seconds)</td>
</tr>
<tr>
<td>B</td>
<td>On bypass due to DC bus overvoltage (1-second beep every 4 seconds)</td>
</tr>
<tr>
<td>C</td>
<td>On bypass due to DC/DC power supply failure (1-second beep every 4 seconds)</td>
</tr>
<tr>
<td>D</td>
<td>PFC failure (1-second beep every 4 seconds)</td>
</tr>
<tr>
<td>E</td>
<td>On bypass due to inverter failure (1-second beep every 4 seconds)</td>
</tr>
<tr>
<td>A&amp;B</td>
<td>UPS Failure (includes dual-fan failure, single-fan failure under certain conditions and battery charger failure) and continuous alarm</td>
</tr>
<tr>

11.2 Troubleshooting

In the event of an issue with the UPS, refer to Table 6 to determine the cause and solution. If the fault persists, contact Emerson Channel Support.

Table 6    Troubleshooting table

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPS fails to start when the On/Alarm Silence/Manual Battery Test button is pressed</td>
<td>UPS is short-circuited or overloaded</td>
<td>Ensure UPS is Off. Disconnect all loads and ensure nothing is lodged in output receptacles. Ensure loads are not defective or shorted internally.</td>
</tr>
<tr>
<td>Battery indicator is illuminated</td>
<td>UPS is not plugged in</td>
<td>UPS is operating from battery mode. Ensure UPS is securely plugged into the wall receptacle.</td>
</tr>
<tr>
<td>Battery indicator is illuminated</td>
<td>UPS input protection fuse has blown/opened</td>
<td>UPS is operating from battery mode. Save data and close applications. Replace UPS input fuse, then restart UPS.</td>
</tr>
<tr>
<td>Battery indicator is illuminated</td>
<td>Utility power is out of tolerance</td>
<td>UPS is operating from battery mode. Save data and close applications. Ensure utility supply voltage is within acceptable limits for UPS.</td>
</tr>
<tr>
<td>UPS has reduced battery backup time</td>
<td>Batteries are not fully charged</td>
<td>Keep UPS plugged in continuously at least 24 hours to recharge batteries.</td>
</tr>
<tr>
<td>UPS has reduced battery backup time</td>
<td>UPS is overloaded</td>
<td>Check load level indicator and reduce the load on the UPS.</td>
</tr>
<tr>
<td>UPS has reduced battery backup time</td>
<td>Batteries may not be able to hold a full charge due to age</td>
<td>Replace batteries. Contact your local dealer, Emerson representative or Emerson Channel Support for replacement battery kit.</td>
</tr>
<tr>
<td>Fault and Bypass indicators and all LED segments of battery level indicator are illuminated</td>
<td>UPS is overloaded or load is faulty</td>
<td>Check load level indicator and remove non-essential loads. Recalculate the load and reduce number of loads connected to UPS. Check load for faults.</td>
</tr>
<tr>
<td>Fault and Bypass indicators and diagnostic A indicator are illuminated</td>
<td>UPS has been shut down due to temperature condition; load is on bypass power</td>
<td>Ensure UPS is not overloaded, ventilation holes are not blocked and room ambient temperature is not excessive. Wait 30 minutes to allow UPS to cool, then restart UPS. If UPS cannot restart, contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault and Bypass indicators and diagnostic B indicator are illuminated</td>
<td>UPS internal DC bus overvoltage</td>
<td>UPS requires service. Contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
</tbody>
</table>
Table 6  Troubleshooting table (cont’d)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fault and Bypass indicators and diagnostic C indicator are illuminated</td>
<td>UPS DC/DC fault</td>
<td>UPS requires service. Contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault indicator and diagnostic D indicator are illuminated</td>
<td>UPS PFC (Power Factor Correction Circuit) fault</td>
<td>UPS requires service. Contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault and Bypass indicators and diagnostic E indicator are illuminated</td>
<td>UPS inverter fault</td>
<td>UPS requires service. Contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault indicator and diagnostic A and C indicators are illuminated</td>
<td>UPS failed the battery test</td>
<td>Replace batteries. Contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault and Bypass indicators and diagnostic C and E indicators are illuminated</td>
<td>UPS has been shut down by a command from the communications port(s)</td>
<td>Your UPS has received a signal or command from the attached computer. If this was inadvertent, ensure the communication cable used is correct for your system. For assistance, contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>Fault indicator and diagnostic A and B indicators are illuminated</td>
<td>UPS failure (includes dual-fan failure, single-fan failure under certain conditions and battery charger failure) and continuous alarm</td>
<td>Ensure fan is not blocked up. If the fault is not removed, contact your local dealer, Emerson representative or Emerson Channel Support.</td>
</tr>
<tr>
<td>AC input indicator is flashing.</td>
<td>UPS detected a line-to-neutral reversal or a loss of proper grounding for UPS; continuous horn and UPS cannot start up in standby status. This is active only when power is first applied to the input. Once the UPS is running, the AC input indicator will flash, unless the input wiring is correctly changed.</td>
<td>Contact a qualified electrician to verify site wiring.</td>
</tr>
<tr>
<td>Battery indicator is flashing.</td>
<td>Battery source is not available; continuous horn.</td>
<td>Check battery connections, completely power down and restart UPS. NOTE: If the battery circuit opens while the UPS is running, it will be detected when the next battery test is performed.</td>
</tr>
<tr>
<td>Bypass indicator is flashing.</td>
<td>Because the voltage or frequency is outside acceptable limits, the bypass is disabled.</td>
<td>The AC input powers the PFC input and serves as the bypass source. If the AC is present but the voltage or frequency exceeds the acceptable range for safe operation with a load, the bypass will be disabled and this indicator will flash, indicating that the bypass is unavailable.</td>
</tr>
</tbody>
</table>

When reporting a UPS issue to Emerson, include the UPS model and serial number. These are on the top panel of the Liebert GXT3.

### Input AC Parameters

- **Nominal Operating Frequency**: 50 or 60Hz (Factory Default is 60Hz)
- **Factory Default VAC**: 120/208VAC at 120 degrees
- **Allowable Input Phase Angle**: 120, 180, 240 degrees, auto-sensing on application of alternating current (Restrictions for L-N voltages other than 120VAC)
- **Factory Default L1-N, L2-N VAC**: 120 VAC nominal
- **User Configurable L1-N, L2-N VAC**: 100/110/115/120/127 VAC (can be modified with configuration program)
- **Input Frequency w/o Battery Operation**: 40 - 70 Hz
- **Input Power Connection**: Hardwire Terminal Block 3W + G (L-L-N-G)
- **L1-N, L2-N, Operating Load Range**:
  - 105% to 130%: 1 Minute
  - 131% to 150%: 10 seconds
  - 151% to 200%: 1 second
  - >200% (impact load): At least 5 cycles

### Output AC Parameters

- **Factory Default VAC**: 120/208VAC @ 120 degrees
- **Allowable Output Phase Angle**: 120, 180, 240 degrees, auto-sensing on initial application of input AC
- **Factory Default L1-N, L2-N VAC**: 120VAC nominal
- **User Configurable L1-N, L2-N VAC**: 100/110/115/120/127VAC, ±2%
- **L1-N, L2-N, Operating Load Range**:
  - 105% to 130%: 1 Minute
  - 131% to 150%: 10 seconds
  - 151% to 200%: 1 second
  - >200% (impact load): At least 5 cycles

### Bypass Protection Limits

- **Disable Bypass Operation**: If input voltage exceeds ±15% of the nominal voltage
- **Re-Enable Bypass Operation**: If input voltage returns to within ±10% of nominal output voltage
- **Disable Bypass Operation**: When the input frequency prevents synchronous operation

### Environmental

- **Operating Temp. °F (°C)**: 32 to 104 (0 to 40); see Table 9 - Operating temperature parameters
- **Storage Temp. °F (°C)**: 5 to 122 (-15 to 50)
- **Relative Humidity**: 0% to 95%, non-condensing
- **Operating Elevation**: Up to 10,000 ft. (3000m) at 104°F (40°C) without derating
- **Audible Noise**: less than 55dBA at 3.2ft. (1m) rear; less than 50dBA at 3.2ft. (1m) front and sides

### Agency

- **Safety**: UL 1778, c-UL Listed
- **RFI/EMI**: FCC Part 15, Subpart B, Class A, FCC Class A
- **Surge Immunity**: IEEE/ANSI C62.41 Category A & B
- **Transportation**: ISTA Procedure 1A

</table>
Using the configuration program, the user may specify the number of external battery cabinets attached to the UPS. The factory default is programmed for internal batteries only.

Table 14 shows the estimated run times at different loads.

12.1 Auto-Learning Battery Run Times

As batteries age, the estimated runtimes may become less accurate. The Liebert GXT3 is programmed to “learn” from a full battery discharge and modify the estimated run time for the measured battery capacity. This can improve accuracy and compensate for aging batteries or batteries that operate at different ambient temperatures.

The UPS will update the anticipated run time calculation only under certain conditions.

- The UPS must have a steady load that is greater than 20%.
- The UPS must be at 100% charge at the start of a battery discharge.
- The battery discharge must continue uninterrupted until the batteries reach their end-of-discharge voltage.

If all conditions are not met, the run time calculation will not be modified.

If the configuration program is used to change the number of battery cabinets, then the values in Table 14 will be restored. This will override any value that is Auto-Learned.
Ensuring The High Availability
Of Mission-Critical Data And Applications.

Emerson Network Power, a business of Emerson (NYSE: EMR), is the global leader in enabling Business-Critical Continuity™ from grid to chip for telecommunication networks, data centers, health care and industrial facilities. Emerson Network Power provides innovative solutions and expertise in areas including AC and DC power and precision cooling systems, embedded computing and power, integrated racks and enclosures, power switching and controls, infrastructure management, and connectivity. All solutions are supported globally by local Emerson Network Power service technicians. Liebert AC power, precision cooling and monitoring products and services from Emerson Network Power deliver Efficiency Without Compromise™ by helping customers optimize their data center infrastructure to reduce costs and deliver high availability.
